Arduino Code

by [lady_ada](#)

Next up, download the Adafruit MCP4725 library. This library does all of the interfacing, so you can just "set and forget" the DAC output. It also has some examples to get you started

[The library is available on GitHub](#). You can download it by clicking the button below.

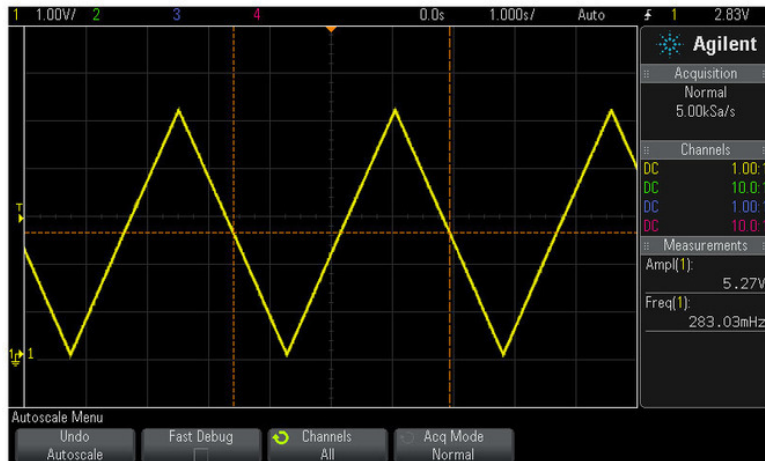

[Download Adafruit_MCP4725 Library](#).

Rename the uncompressed folder **Adafruit_MCP4725**. Check that the **Adafruit_MCP4725** folder contains **Adafruit_MCP4725.cpp** and **Adafruit_MCP4725.h**

Place the **Adafruit_MCP4725** library folder your **sketchbookfolder/libraries/** folder. You may need to create the **libraries** subfolder if its your first library. You can figure out your **sketchbookfolder** by opening up the Preferences tab in the Arduino IDE.

Restart the IDE.

Open up the **File→Examples→Adafruit_MCP4725→trianglewave** sketch and upload it to the Arduino. Then connect your oscilloscope (or an LED + resistor if you don't have access to an oscilloscope)

We also have a sine wave version showing how to use a lookup table to create a more complex waveform.

Using the library

The library is very simple, so you can adapt it very quickly.

First, be sure to call **begin(addr)** where **addr** is the i2c address (default is 0x62, if A0 is connected to VCC its 0x63). Then call **setVoltage(value, storeflag)** to set the DAC output. **value** should range from 0 to 0x0FFF. **storeflag** indicates to the DAC whether it should store the value in EEPROM so that next time it starts, it'll have that same value output. You shouldn't set the flag to true unless you require it as it will take longer to do, and you could wear out the EEPROM if you write it over 20,000 times.

Increasing the speed

One thing thats a little annoying about the Arduino Wire library in this case is it is set for 100KHz transfer speed. In the MCP4725 library we update the speed to 400KHz by setting the TWBR

```
TWBR = 12; // 400 khz
```

You can speed this up a bit more, if you'd like, check the ATmega328 datasheet for how to calculate the **TWBR** register.
